

You can configure your Android Mobile Device to access Eduroam by following this guide:

- 1) Download and install the Eduroam CAT application from the **Google Play Store**
- 2) Download the configuration file from this site: <https://cat.eduroam.org/>
- 3) Select Institut National des Langues de Luxembourg :

- 4) Open the file with the Eduroam CAT application and enter the INL login credentials.

Note that you need to input “[@peda.cli.lu](mailto:@peda.cli.lu)” behind your identification number as “identity”. For this example, the identification number “123456” is used.

Wait and verify if it connects successfully to Eduroam. If it's not connecting, delete the profile from the Application and forget Eduroam from the WIFI list on your phone settings then retry from the beginning.

Congratulations! At this point you successfully configured your device for Eduroam.
